Project **RL-ER02 / 200 Area Remedial Action**

General Project Information

Project Description Narratives

Purpose, Scope, and Technical Approach:

Purpose: This PBS provides for the management and integration of activities required to assess and remediate past-practice waste sites in the 200 Area of the Hanford Site. The 200 Areas are in the center of the Hanford Site, and consists of approximately 700 waste sites located in and adjacent to the 200 East and 200 West Areas.

Work scope within this PBS includes:

Assessing the waste sites to determine the type and extent of contamination, such that a Record of Decision (ROD) for remediation of the waste sites can be prepared.

Preparing the remedial design and performing the remedial actions necessary to implement the ROD.

Waste site closeout and revegetation

Scope: The 200 Areas are located on the central plateau of the Hanford Site reservation. The 200 Areas' Source Operable Units (OUS) contain approximately 450 waste sites and 250 unplanned releases (UPRs) that require action. These waste sites and UPRs were associated with the spent fuel processing activities that occurred in the 200 Areas.

The soil contamination from the liquid and solid wastes contain low-level radiological, low-level mixed wastes, and chemical constituents. Groundwater contamination exists at various 200 Area OUS, and is addressed in the ER Groundwater Management Project.

The planned remedial actions are designed to reduce the risk to the public, workers, and the environment by constructing engineered barriers to isolate the contamination in the 200 Area waste sites from the environment. These actions will be taken in accordance with a Record of Decision. Much of the 200 Area will be used for management of contaminated media and disposal of waste materials. The 200 Area Source Remedial Action Project will be followed by long-term monitoring to ensure that cleanup standards continue to be met.

Technical Approach: The 200 Area Source Remedial Action Project will typically achieve cleanup goals by isolating the contaminated soils and isolating contamination with barriers. If remedial alternatives are established which require waste disposal, the ER Waste Disposal Project will transport the wastes to the ER Disposal Facility for final disposal.

The 200 Area remedial action includes placement of barriers over the waste sites and burial grounds (within the 200 east area and 200 west area fencelines) and excavation of contaminated soils (outside the fenceline). This remedy is a planning assumption only and does not indicate that any decisions have been made relative to the remediation of the 200 Area waste sites. Remedial actions that could be required will be evaluated once characterization is complete. 1 1 1

An existing prototype barrier testing and monitoring program is being used to generate performance assessment information to support the long-term use of barriers at Hanford. Additional data may also be required to address regulator and public stakeholders concerns regarding the use of barriers.

Project Baseline Summary Report

Data Source: **EM CDB**

Site Summary Level: **Hanford Site**

HQ ID: **0416**

Project **RL-ER02 / 200 Area Remedial Action**

Project Description Narratives

Technology needs are identified at the project level. These needs are subsequently endorsed by the Hanford Site Technology Coordination Group. The following technology needs have been identified as high priority for this PBS:

- , Detection and characterization of radioactive contaminants and metals in soils
- , In-situ remediation of radioactive contaminants and metals in soils
- , Better retrieval and handling methods of radioactive contaminants and metals in soils
- , Better treatment methods for radioactive contaminants and metals in soils
- , Detection and delineation of burial ground contents
- , Segregation of transuranic (TRU) from non-TRU debris from burial grounds
- , Segregation and handling of large pieces of debris from burial grounds

Project Status in FY 2006:

The 200 Area regulatory milestones require characterization of all waste sites in the 200 Areas to be completed by December 31, 2008. Based on this requirement, the majority of the source waste sites will have completed the assessment phase, and the remaining sites will have work plans in place delineating assessment activities by FY06. Remedial action activities could start as early as FY02 with up to six source OUs remediated by FY06 (~ 104 individual waste sites).

Post-2006 Project Scope:

The balance of assessment activities would be completed by December 31, 2008,
596 waste site would remain to be remediated in the 200 Area

Project End State

The 200 Area is essentially equivalent to the area referenced in the Hanford Site Strategic Plan as the Central Plateau.

Central Plateau Goal: The 200 Areas and Central Plateau will be used for the management of nuclear materials and the collection and disposal of waste materials that remain onsite and for other related and compatible uses. Cleanup levels and disposal standards will be established that are consistent with these long-term uses.

Soil Sites End State

Soil sites will be closed in place with surface barriers, or other remedial alternatives will be established within individual RODs or permit modifications.

Cost Baseline Comments:

The cost estimates for the ER Project are developed through the use of MCACES models and activity-based estimates for project activities like program management and support.

The contingency for outyears was developed through the use of a "Monte Carlo" analysis and selection of an acceptable level of risk.

Project **RL-ER02 / 200 Area Remedial Action**

Project Description Narratives

Safety & Health Hazards:

The Richland Environmental Restoration (ER) Project's primary responsibilities are the cleanup of past-practice waste sites, addressing the contaminated groundwater, and decontamination and decommissioning of surplus facilities. In 1987 the Hanford Site Federal Facility Agreement and Consent Order (TPA) was signed by EPA, Ecology, and DOE. This agreement is the primary driver for essentially all remediation and D&D activities.

The 200 Areas, which are located in the center of the Hanford Site, contain chemical processing and associated ancillary support facilities. The irradiated fuel elements were transported by rail car from the 100 Area reactors to the chemical processing plants (canyon facilities) in the 200 Areas for separation and purification of the special nuclear materials (SNM). During the years of SNM production, liquid wastes were either stored in tanks or disposed of to the ground (soil column). As a result, there are significant quantities of buried solid wastes, contaminated soils and areas of groundwater contamination.

The ER Remedial Action Project is responsible for assessment and remediation of the 200 Area past-practice waste sites. Although priority for remediation is focused along the Columbia River in the 100 and 300 Areas as expressed in stakeholder and Tribal Nation values relative to protection of the Columbia River, regulatory milestones (i.e., 200 Area assessment activities) are also being addressed and negotiated for operable units in the 200 Areas.

Approximately 1310 billion liters (346 billion gallons) of liquid and 379,000 cubic meters (495,700 cubic yards) of solid waste have been disposed to the ground in the 200 Areas at the Hanford Site. The liquid and solid waste sites contain both radionuclides and hazardous materials. The Remedial Action Project is responsible for the assessment and remediation of these waste sites. Responsibilities include: (1) management, planning, investigation, alternatives selection, public review and documentation required to reach a Record of Decision (ROD); followed by, (2) management, planning, engineering, and documentation necessary to implement the remedial design and complete the associated remedial actions.

The 200 Areas Source OUs contain waste sites and UPRs that are associated with the irradiated fuel element processing activities that occurred in the 200 Areas. Remediation of the 200 Area waste sites are anticipated to be a combination of engineered barriers and removal actions. Barrier monitoring activities are currently taking place for the existing demonstration barrier at the 216-B-57 crib (200-BP-1).

The soil contamination from the liquid and solid wastes contain low-level radiological, low-level mixed wastes, and chemical constituents and will result in an estimated 1 million loose cubic meters of contaminated soils requiring disposal and barriers covering approximately 4.5 million square meters. Groundwater (GW) contamination exists at various 200 Area operable units (OUS), and is addressed in PBS ER-08.

The remedial actions are designed to reduce the risk to the public, workers, and the environment by constructing engineered barriers to isolate the contamination in the 200 Area waste sites from the environment. These actions will be taken in accordance with an approved ROD. Much of the 200 Areas will be used for management of contaminated media and disposal of ER waste site materials. The 200 Area remediation strategy will better define potential remediation alternatives.

Note: The six operable units (OUs) that make up the single-shell/double-shell tank farm areas are not part of ER work scope.

HQ ID: **0416**

Project **RL-ER02 / 200 Area Remedial Action**

Project Description Narratives

Each subproject will conduct a hazard analysis evaluation or an operational readiness review as necessary.

Safety & Health Work Performance:

The resources necessary to accomplish the work safely are provided through the Authorization Basis, the Site Health and Safety Program requirements, and through the resources allocated to the site's integrated safety management system in the following functional categories: radiological controls, emergency management, fire protection, industrial hygiene, industrial safety, occupation medical services, management and oversight, transportation safety, nuclear safety and management oversight.

ER resources are planned and allocated into these categories by functional responsibility through the work breakdown structure and resource loaded into the project for each fiscal year. Average hourly labor rates vary among projects based on the work scope and related skills mix. For the purpose of this ADS, for all the functional areas the assumed cost per FTE is \$61 per hour which is based on an FY98 planning average for labor.

The Emergency Preparedness functional task includes inspection of emergency facilities and equipment; emergency response team personnel training, drills and exercises relative to personnel contamination; construction accident response; maintaining/updating the current emergency plan based on site-specific hazards; coordination with state and local authorities and federal agencies; responses to worker injuries; and recordable occurrences and of normal events.

The Fire Protection functional task includes related inspections and testing; flammable and explosive material control; review design plans/specifications for compliance with regulations, codes, and standards; and review and concurrence of work packages.

The Industrial Hygiene functional task includes the Chemical Management system, anticipation, recognition, evaluation and control of health hazards; redesign of equipment and tasks; review and approval of work packages; design of airborne fiber wetting systems; respiratory protection standards; respiratory protection equipment supplies; substitution of less hazardous materials; written and verbal communication of real and perceived hazards; personnel protection, and asbestos fiber counts and sample analysis.

The Industrial Safety functional area includes electrical safety; machinery and pressure system safety; hoisting; rigging, and material handling, lockout/tagout; confined space controls; platform, man-lift and scaffolding usage; safe surfaces for walking and working; hand and portable power tool safety; explosives and hazardous material handling, construction safety; review of work packages; site surveillances or subcontractor review.

The Management and Oversight functional task includes S&H documentation, action tracking; S&H self assessment activities; internal audits and surveillance; external S&H program reviews; operational readiness reviews; and Voluntary Protection Program (VPP); trend analysis; lessons learned; coordination and communication with DOE, state and local authorities.

The Management, Oversight, and Reporting functional task includes the coordination of project environmental protection plans, documentation and control, information management, compliance and corrective action tracking, appraisals and self assessments and general environmental monitoring and coordination.

Project **RL-ER02 / 200 Area Remedial Action**

Project Description Narratives

The Nuclear Safety functional task includes providing direction for the implementation of DOE Orders and Standards related to nuclear safety. In addition, the functional group assists the projects in the development, implementation, and oversight of the safety analysis process.

The Occupational Medical Services functional task includes medical scheduling, labor and industries, and OSHA reporting; oversight of the Site Occupational Medical provider; hazardous worker or asbestos worker pre/post-job medical screening coordination, tracking; and case management.

The Radiation Protection functional task includes radiation monitoring equipment and procedures for radiation controls, oversight of personnel and facilities, radiation control monitoring, interlocks,, instrumentation for shielding for radiation-generating devices; equipment and procedures used to minimize or mitigate external exposures; and personnel dosimetry, bioassay program, and radiation-exposure records.

The Transportation Safety functional task includes the activities required to ensure safe packaging and transportation of asbestos, radioactive and hazardous materials, and approval of D.O.T. shippers and container documentation. NOTE: The amount of funding made available for this PBS in any fiscal year will determine the work that will be performed, which will, in turn, be a basis for adjustment in the associated S&H requirements.

PBS Comments:

The 200 Areas Source Remedial Action activities have not historically been the focus of significant activity or funding due to the important of 100 and 300 Areas remediation along the Columbia River. Assessment activities for the 200 Areas are scheduled within the Ten-Year Plan time frame.

The ER Project Team in conjunction with the Regulators has developed a 200 Area strategy for assessment and remediation. The strategy redefines the current operable unit waste site groupings relative to assessment of the waste sites.

Baseline Validation Narrative:

Baseline validation by Team Associates for DOE.

The DOE requested an independent contractor, Team Associates, to perform a validation of the Richland Environmental Restoration Project. This validation was a follow up of the validation performed for the FY 1995 Baseline. Estimate models with near-term implementation schedules and total project summary costs were reviewed. The validation was broken down into three distinct efforts consistent with the validation objectives.

- 1) An in-depth review of MCACES models provided by DOE was performed
- 2) A review of near-term schedules for 100 BC and 300 FF areas to evaluate reasonableness and feasibility of achievement.
- 3) A top down assessment of the cost estimating process for consistency of approach to identify opportunities for improvement.

There is a formal validation of the current baseline (developed in October 1998 and approved in January 1999) scheduled for March 1999.

Technology Needs

Site Need Code: RL-SS12

Site Need Name: Cost Effective, In Situ Remediation in the Vadose Zone of One or More of the Following Radionuclides: Uranium, Plutonium, Cesium, Cobalt, and Strontium-90

Focus Area Work Package ID: SS-11

Focus Area Work Package: Validation, Verification, & Long-Term Monitoring of Containment & Treatment

Focus Area: SCFA

Agree with Technology Link: Y

Benefits (Cost, Risk Reduction, Both): Both

Technologies

Cost Savings (in thousands of dollars)

Range of Estimate

In Situ Soil Flushing Technology for Mobilization, Extraction and Removal of Metals and Radionuclides

Related CCP Milestones

Related Waste Streams
